Colombo, Sri Lanka

PROFESSIONAL SUMMERY

Data Science student with previous experience in data warehousing, seeking a challenging position in the field of data science. Skilled in data engineering, AI engineering, and data science, with a strong interest in contributing to innovative projects while developing experience in decision making and problem solving.

EXPERIENCE

- Intern - Enterprise Data Warehousing And Data Analytics** (6 Months) September 2025 - March 2026
National Development Bank Colombo 02, Sri Lanka
 - Automated the reconciliation process between two internal system databases using Python, significantly reducing processing time and improving operational efficiency.
 - Developed a tool to automatically generate a data dictionary, creating a metadata catalog for any databases that helps analysts quickly locate and understand available data.
 - Created analytical dashboards to track bank savings strategies and analyze customer demographics, supporting data-driven decision-making
 - Built branch-wise performance dashboards and analyzed cross-selling patterns to identify performance gaps and actionable opportunities to enhance cross-selling outcomes.

EDUCATION

- Bachelor of Science (B.Sc.) Honours in Data Science** Jun 2024 - Present
Sri Lanka Institute of Information Technology (SLIIT) Colombo, Sri Lanka
- Bachelor of Science (B.Sc.) Physical Sciences** 2025-Hold
University of Sri Jayewardenepura Colombo, Sri Lanka
- Kingswood Collage Kandy** Dec 2023 - Jan 2021
G.C.E Advance Level Physical Science Stream Kandy, Sri Lanka
 - Results: B-(Physics) C-(Mathematics) C-(Chemistry)

PROJECTS

- Ross: Legal Workspace with Dynamic RAG Systems (GraphRAG, RAPTOR)** May 2026 – Ongoing
Tools: Vite, Node.js, FastAPI, Python, MongoDB, Gemini 3.5 (Flash/Embeddings), Scikit-learn (GMM), GraphRAG
 - Developed a full-stack legal intelligence workspace that helps practitioners and students analyze long, complex legal documents through automated summaries and grounded conversational agent.
 - Engineered a multi-route ingestion engine that formats unstructured files into custom text windows based on document type (Adversarial filings, Statutory codes, or Commercial contracts).
 - Built a recursive summarization pipeline (RAPTOR) and chat bot powered by Gemini and GraphRAG, mapping explicit document hierarchies to deliver highly cited answers while cutting token costs by up to 30
- FlyCast: Flight Delay Prediction Open-Source Web API** July 2025 - August 2025
Tools: Python, Pandas, Scikit-learn, Flask, Tailwind CSS, JavaScript
 - Designed a web API to predict flight delays and cancellations using classification models.
 - Trained machine learning models in Python with XGB Classifier, using US inter flight data. Created a API end-points and detailed documentation with API references.
 - Created a responsive user interface allowing users to for-see upcoming flights and view predicted delay/cancellation outcomes.
- Automated Multi-Source Social ETL Framework** March 2026 - April 2026
Tools: Python, Pandas, Supabase (PostgreSQL), GitHub, JSON
 - An automated ETL pipeline designed to monitor and ingest brand mentions and public sentiment across social media platforms.
 - Developed a modular extraction engine using Python that allows for rapid switching of target brand keywords.
 - Implemented text processing and sentiment scoring using VADER to transform unstructured social commentary into structured, categorical business intelligence.

AWARDS AND HONORS

- **Deans List Award 2025**
Issued by Sri Lanka Institute of Information Technology
 - Faculty of Computing Certification of Excellence in recognition of academic excellence in the year of 2025

January 2026

SKILLS

- **Programming Languages:** Python, Java, C, R,
- **Web Technologies:** Node JS, React, Express, JSP/Servelet, Spring Boot, Tailwind
- **Database Systems:** MSSQL, MySQL, Mongo DB, CromaDB
- **Data Engineering Tools:** Big Query, Snowflake, Microsoft Azure
- **AI Tools:** Langchain, llamaIndex, RAPTOR, BERT, GraphRAG
- **Data Science & ML Tools:** Python Visualization and Statistical Libraries, Classification, Regression and Time series Models
- **DevOps & Version Control:** Git/ Git Hub
- **Other Tools:** Power Bi

CERTIFICATIONS/COURSES

- **Intro to Snowflake for Devs, Data Scientists, Data Engineers** 
Snowflake
 - Understand the basics of Snowflake’s capabilities for data engineering, generative AI, machine learning, and app development.

Ongoing
- **Build RAG Applications: Get Started** 
IMB
 - Focusing developing RAG applications with langchain, llamaIndex and advance RAG technologies including RAPTOR.

May 2026
- **Generative AI Applications: Get Started** 
IMB
 - Focusing on RAG pipelines with langchain, vector databases with Mongo DB, and AI engineering fundamentals.

April 2026
- **Introduction to Data Engineering** 
IMB
 - Focusing on ETL pipelines, relational databases, and data engineering fundamentals.

December 2025
- **Introduction to Data Engineering on Google Cloud**
Google Cloud
 - building scalable pipelines, BigQuery warehousing, and real-time data processing.

Ongoing
- **Introduction to Data Science with Python** 
HarvardX CS109x At edX
 - Studied data modeling fundamentals including k-NN, linear models, Ridge, LASSO, model selection, overfitting avoidance.

July 2025

ADDITIONAL INFORMATION

Languages: English Language, Sinhalese Language (Proficiency level A)
Interests: Machine Learning, Data Science, Statistics, Web development, AI Research
